FOREWORD

The well records here given are a continuation of those published in Bulletins No. 30 and 30-A. Descriptive data for each of the wells and maps showing their locations are given in Bulletin No. 30. A few new wells are included and the descriptive data in the case of these wells are included in this bulletin. These include a few which are not plotted on Bulletin No. 30 maps.

The earthquake on March 10, 1933, caused an abrupt fluctuation in the water table in the pressure area of the Coastal Plain.

The precipitation records here given are a continuation of those published in Bulletin No. 30-A in which bulletin is a map showing location of stations listed in 1932. Several additional stations and older records have also been added. The totals are for the season July 1st to June 30th. There is a tendency on the part of the observers to neglect the minor storms, particularly those occurring at the beginning and at the end of the season. Through inspection of the records at nearby stations, the amount of precipitation so neglected has been estimated. This amount has been added to the recorded precipitation and an asterisk indicates where such a change has been made.

Records of daily precipitation for most of the stations included herein are available in the office of the Division of Water Resources. Prints of these can be obtained.

Cooperation of the agencies through which the records have been made available is appreciated. Proper credit is given in the tabulation of data for each well and in the table showing precipitation station data.
